

Whipple Hill integrates with CareFlow EMR to allow independent schools to manage and control their students' medical history and athletic trainer and school counselor visits. The school health center can keep track of allergies, medications, immunizations, and visits to the health center, along with progress notes.

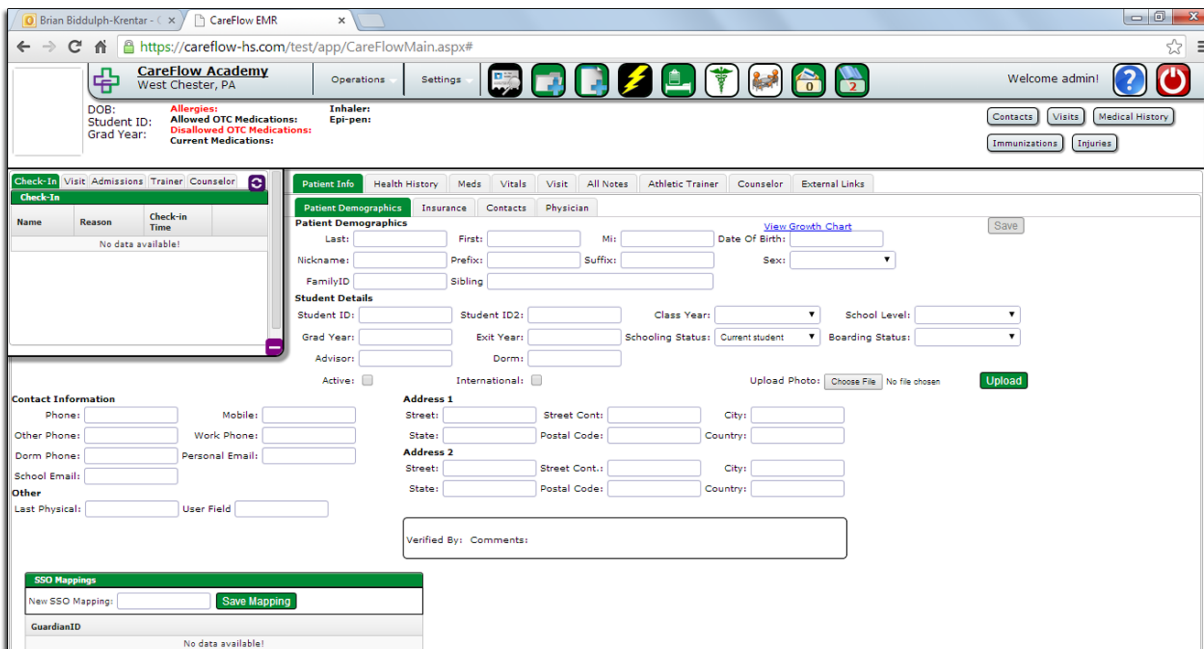

Student Information

CareFlow is updated with student demographic and emergency contact information that exists within Whipple Hill. The manner in which this information is updated is configurable for every school. Some of the options include real-time, a daily batch, or a weekly batch update. An administrator can also control the roles that are updated.

The student demographic information exists within the Info tab of CareFlow while the student's contact information is maintained on a separate Contacts tab (e.g. emergency contacts, relatives, guardians). This information also displays in the Patient Synopsis window of CareFlow, along with other important highlights from the student's vital health data.

Single Sign-on:	→
<small>*In addition to WhippleHill fees, contact ecosystem partner for additional pricing information.</small>	
→ from WH to CF	<input checked="" type="checkbox"/> Verifiable
← from CF to WH	<input type="checkbox"/> Non-Verifiable
↔ both WH & CF	N/A Not Applicable

Single Sign-On

The SSO, or single sign-on, integration authenticates users from WhippleHill into their CareFlow accounts. No additional usernames, passwords or URLs are needed. SSO reduces password fatigue among users and decreases the volume of password-related phone calls to the IT department.

Parents, Students, Faculty/Staff will use the SSO by logging into WhippleHill and clicking on the CareFlow link. This action automatically redirects the user to the CareFlow platform where they can complete their required forms and update any necessary demographic information.
